What You Can Test

Available Features with Demo Account:

1. View Interactive Map

- See all reported infrastructure issues across Johannesburg
- Filter by issue type: Potholes, Water Leaks, Traffic Lights, Street Lights, Drainage, Other
- Click on map markers for detailed issue information
- View upvotes and current issue status (New, Acknowledged, Resolved)
- Use the search bar to find specific locations or issues

2. Report New Issues

- Click "Report" in the navigation menu
- Select from 6 issue categories
- Allow GPS location detection or enter location manually
- Upload photos directly from your device camera
- Add optional detailed descriptions
- Submit and receive a unique Report ID
- Get automated email notification confirmation

3. View Community Dashboard

- Total reports submitted by all users
- Number of issues resolved
- Active users count
- Trending issues by location and type
- Real-time statistics updates

4. User Profile

- View personal statistics (reports submitted, upvotes received)
- See member since date
- Export your reports to PDF format
- Change city location

- Track your community impact

5. Additional Features

- Toggle between Dark and Light theme modes
 - Real-time search functionality with instant filtering
 - Share reports via WhatsApp
 - Receive email notifications for report updates
 - Offline functionality (works without internet after first visit)
 - Install as a Progressive Web App on mobile devices
-

System Compatibility

Progressive Web App (PWA) Features:

- Can be installed as an app on mobile devices
 - Works offline after initial visit
 - Provides native app-like experience
 - No app store download required
-

Important Notes for Judges

Functionality:

- This is a fully functional demo account with all features enabled
- Feel free to submit test reports - they are isolated from production data
- All features are real-time and connected to a live Supabase database
- The application works best on modern browsers (Chrome, Firefox, Safari, Edge)
- Location services may prompt for permission - please allow for the full experience

Performance:

- Application loads in under 3 seconds on standard connections
- Real-time updates happen instantly
- Offline functionality activates after first visit

- Progressive Web App features enhance mobile experience
